

GoPlan

Academic planning for university students

An MVP seeking a university pilot

planwithgoplan.com

Problem

Academic choices need a direction

Students need to connect their interests and career goals with degree, minor and elective choices.

A degree plan needs regular updates

Unavailable courses and changing goals can alter remaining semesters and the expected graduation date.

Internships and exchange plans also need to fit the degree.

Solution and MVP

Student goals become an editable semester plan.

Academic planning

AI recommends degree, minor and elective choices.

Academic rules check prerequisites and credit limits.

Ongoing use

Track completed courses, revise the plan and save progress.

Explore internship and exchange targets. Export to Excel.

Current coverage: supported AUI programs. Adviser review remains necessary.

Users and alternatives

Initial users

Students choosing a direction or revising their degree plan.

Start with supported AUI programs.
Expand through university pilots.

Existing approaches

Advisers, catalogues and planning spreadsheets.

Platforms such as Stellic cover degree planning and advising.

GoPlan focus

Connect personal goals, checked degree plans and opportunity targets in one student workspace.

Current stage

MVP built

No users, revenue or signed partners yet.

What the first pilot must establish

Do students complete useful plans and return to update them?

Do advisers accept the plans?

What does a completed plan and each revision cost?

Business model to test

No pricing model selected yet.

University-funded access

A university pays for student access and pilot support.

Student semester pass

Students pay for continued planning and AI revisions.

First route to users: advising teams and student associations.

Costs and funding

Groq GPT-OSS 120B

USD per 1 million tokens

Input: \$0.15

Output: \$0.60

Example: \$0.014 per plan

Illustration: 50k input + 10k output tokens.

Model tokens only, not a measured bill.

Research and revisions add cost.

Funding would cover

AI and web research usage.

Hosting, storage and email.

Academic data review.

Reliability work and pilot support.

Seeking pilot funding or cloud credits.

Budget depends on pilot scope.

Incubation plan

Pilot

Recruit students with a university partner.
Review the plans with academic advisers.

Measure

Track usefulness, return use, errors and cost per plan.
Test willingness to pay and university interest.

Expand

Add another university after the pilot meets agreed targets.

Seeking university partners for student pilots and academic data review.
