

GoPlan

Degree planning for admitted students

Seeking university partners for a funded pilot

Soulaymane Alahiane

planwithgoplan.com

Problem

Understanding the university takes time

Newly admitted students may choose a degree before they understand its programs, requirements and career paths.

Interests need structured exploration

Students may not have reflected on the questions that clarify what they want to study and why.

Program information takes effort to find

Reading scattered catalogues and program sheets takes time. Some sheets may be difficult to access.

Solution and MVP

Interest exploration

A guided questionnaire helps students reflect on their goals and compare degree options with explained AI recommendations.

Program information

Reviewed university data brings requirements into one place. Academic rules check prerequisites and credit limits.

Degree planning

Build and revise a semester plan. Track progress and save it. Explore internships and exchanges. Export to Excel.

Current coverage: supported AUI programs. Adviser review remains necessary.

Users and alternatives

Target users

Admitted students choosing or planning a degree, with room to explore academic options.

Start with supported AUI programs.

Existing approaches

Advisers, catalogues and planning spreadsheets.

Platforms such as Stellic cover degree planning and advising.

GoPlan focus

Help admitted students explore their interests and plan a degree using reviewed university requirements.

MVP and university pilot

Current MVP

Student planning interface.
Email-based accounts.
Saved plans, progress and exports.

Planned with pilot universities

Student-ID accounts.
Adviser accounts linked to advisees.
Shared plans within each university.

Pilot goal: shared advising

Students and advisers discuss the same plan.
Each adviser can follow their assigned students.

MVP built. No users, revenue or signed university partners yet.

University-funded model

University pays

Partner universities fund access for their students.
Students use GoPlan as a university-provided service.

Pilot before wider adoption

Agree the cohort, support needs and institutional pricing.
Pilot results guide pricing and wider deployment.

Pilot partnerships are key to adoption and university funding.

Costs and funding

Groq GPT-OSS 120B

USD per 1 million tokens

Input: \$0.15

Output: \$0.60

Example: \$0.014 per plan

Illustration: 50k input + 10k output tokens.

Model tokens only, not a measured bill.

Research and revisions add cost.

Groq public rates checked 6 October 2026

Partner funding covers

AI and web research usage.

Hosting, storage and authentication.

Academic data review.

Student and adviser pilot support.

Seeking university-funded pilots.

Budget depends on pilot scope.

Pilot and expansion

Partner

Secure a university sponsor and adviser participation.
Review academic data and agree a small student cohort.

Build and test

Add student-ID accounts and linked adviser workspaces.
Measure accuracy, decision usefulness, time saved and cost.

Expand

Use pilot results to agree pricing and serve more universities.

Seeking university partners for funded pilots and academic review.
